

**A BAMBOO JOURNEY**  
**Fiaso Bamboo Training Centre**

# FIASO BAMBOO TRAINING CENTRE

BONO EAST REGION, GHANA

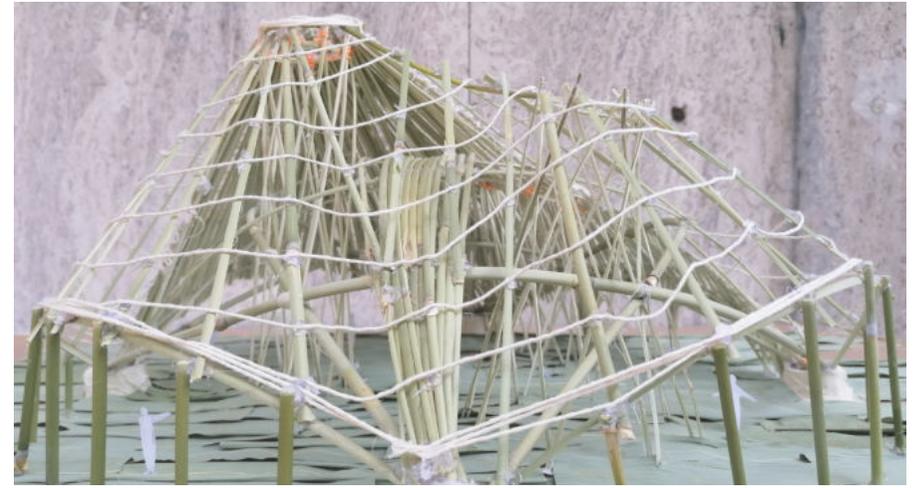

Individual project  
2021  
BambooU/IBUKU  
Bamboo building course

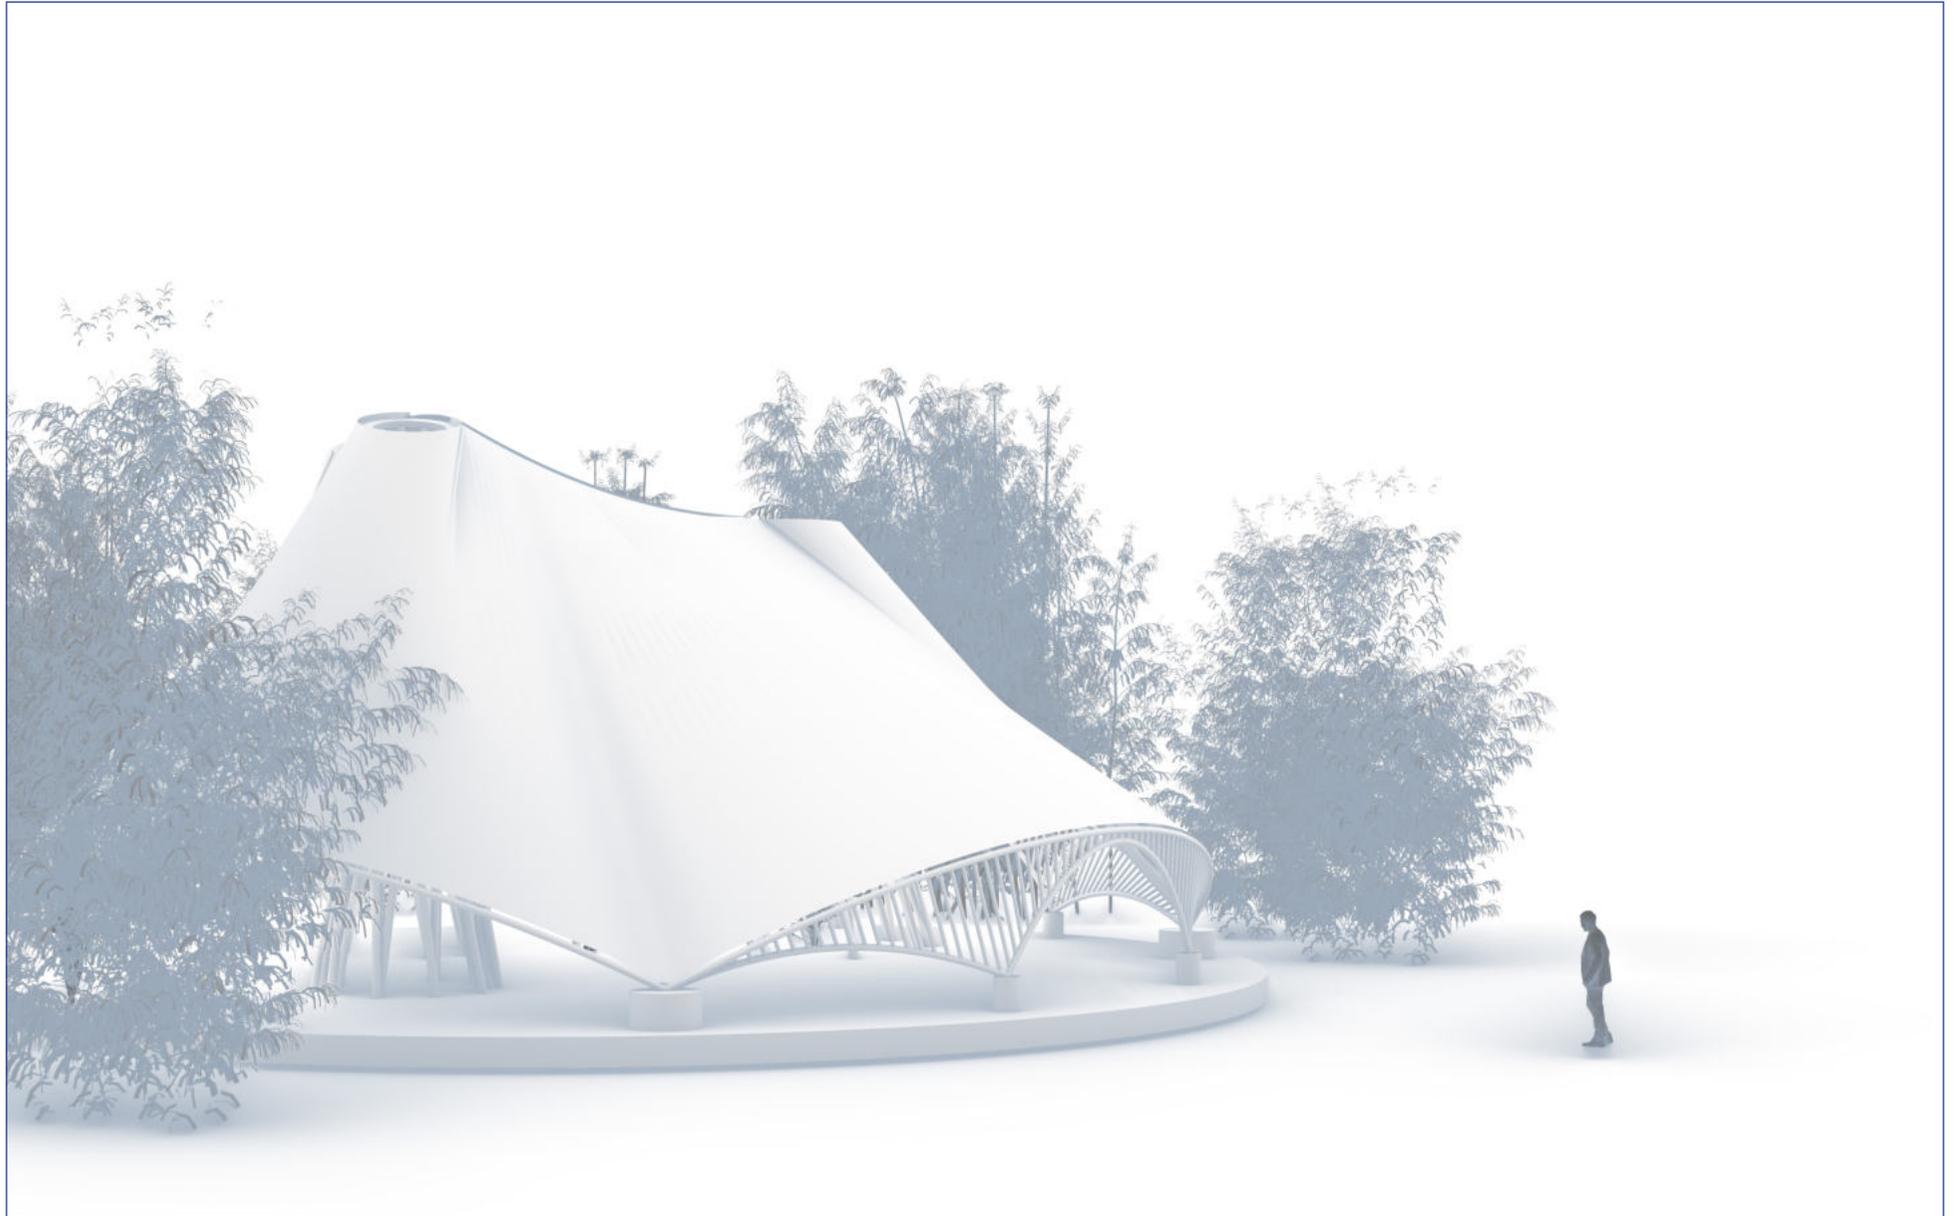

The preliminary structural design for the Fiaso Bamboo Training Centre is developed in collaboration with the NGO Grow Colorful Ghana for the rural community of the Bono East Region, Ghana. Various buildings make up the complex, where experts and members of the community teach bamboo construction in a public, entertaining, and dynamic learning.

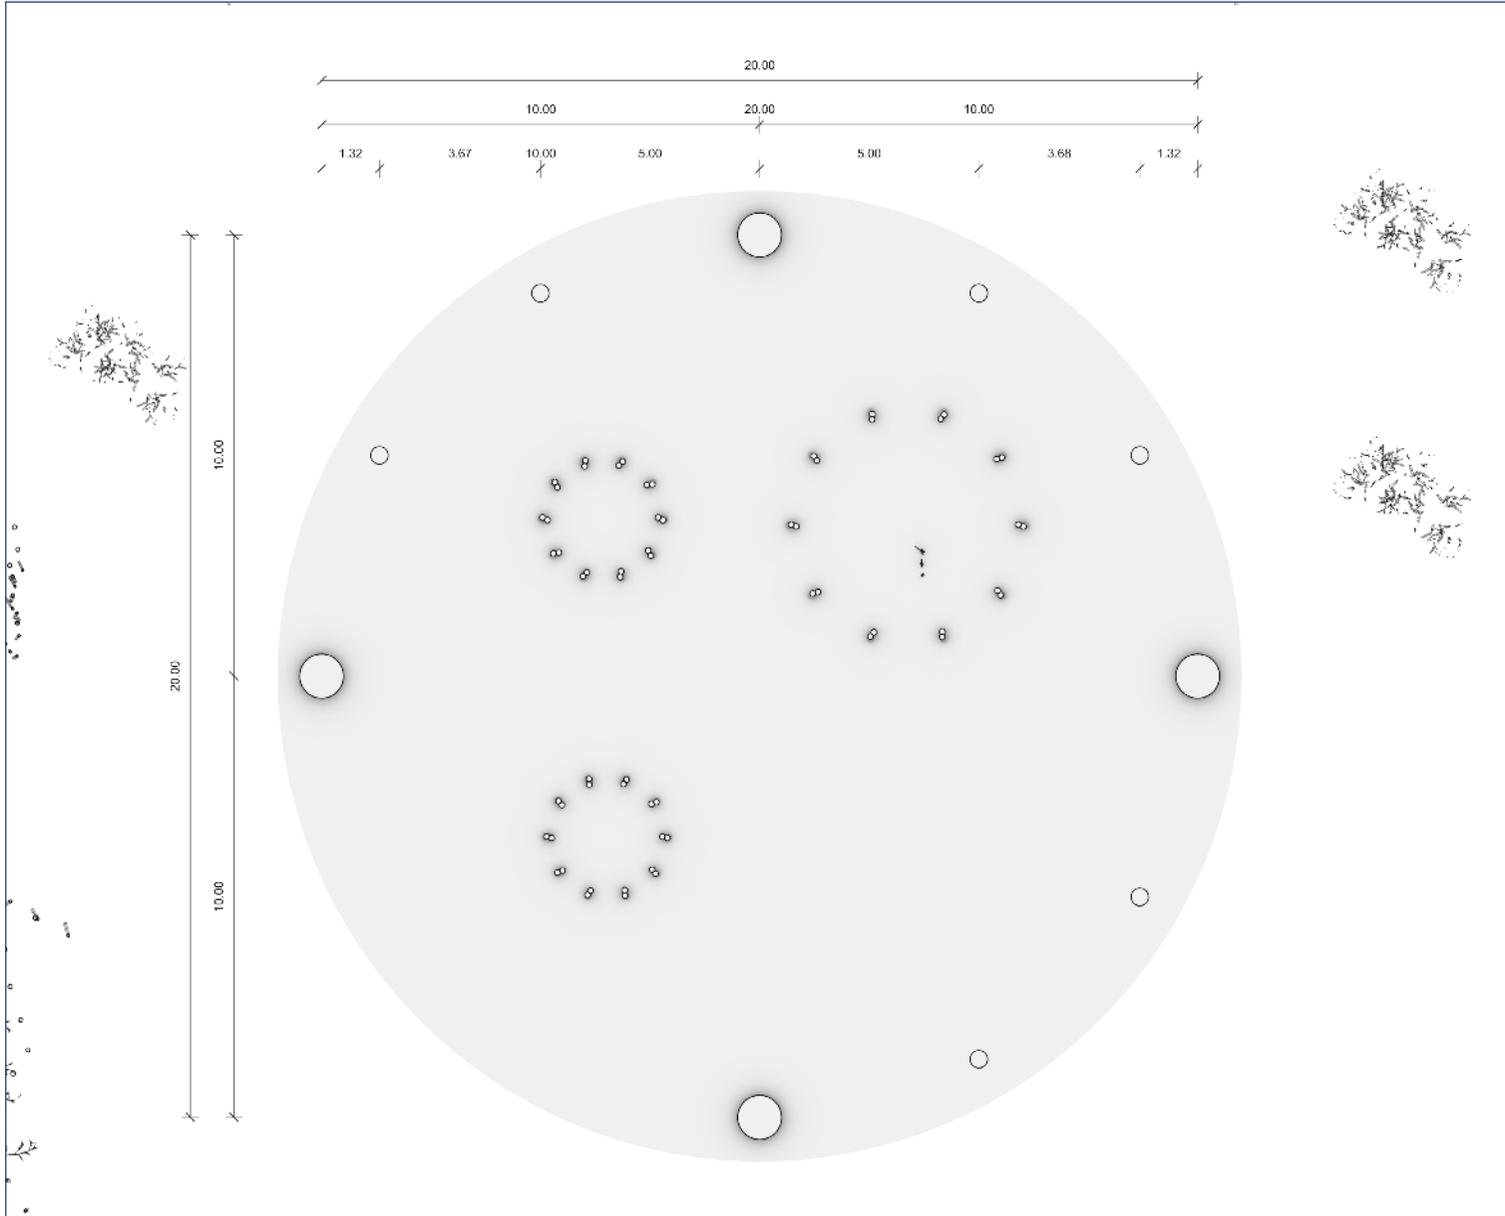

The project intends to show the usage of bamboo as a sustainable construction material, promoting livelihood opportunities for rural youth through bamboo skill development. The center provides local people with access to technical support, knowledge, and training needed to make good use of their bamboo resources.

**The seminar room and workshop area**, developed in the preliminary structural design, are vital elements of the center. It is the place where learning, experimentation, tutoring, relations happen strengthening community engagement and public participation.
